PROFESSIONAL SUMMARY

Senior Data Scientist with 9+ years of experience building and scaling AI/ML and Generative AI solutions across finance, AML, and maritime analytics domains. Currently leading a team of 4 and owning end-to-end data platforms, including real-time ETL systems and LLM-powered applications, delivering up to 95% reduction in manual effort and significant cloud cost optimizations. Experienced in designing production-grade ML systems, RAG architectures, and data pipelines on AWS, with strong expertise in Python, PySpark, and MLOps. Adept at translating business problems into scalable AI solutions and collaborating with cross-functional stakeholders to deliver high-impact data products.

SKILLS

- **GenAI:** LLMs, Prompt Engineering, RAG, AI Agents
- **Data Science:** Deep Learning, NLP, Statistical Modeling, Machine Learning,
- **Data Engineering:** GenAI system design, ETL, MLOps, Cloud Engineering, Pipeline automation
- **Languages:** Python, R, SQL, PL/SQL, HiveQL
- **Frameworks:** Aysnc python, LangChain, PySpark, PyTorch, AWS, Azure DevOps, Docker, REST API, CI/CD, Streamlit

EDUCATION

- **M.Sc, Statistics:** Indian Institute of Technology Kanpur(IITK), India 2014 - 2016
- **B.Sc, Statistics, Mathematics:** University of Lucknow, India 2011 - 2014

WORK EXPERIENCE

Senior Data Scientist – Team Lead Apr 2022 – Present
S&P Global Commodity Insights, Gurugram, India

- Led a team of 4 to develop and scale a flagship shipping analytics platform.
- Developed a RAG-based document extraction system, achieving 80% accuracy and manual effort by 70%.
- Built an PoC for AI-powered natural language query agent using LLMs, Spark, and AWS.
- Implemented ML model to predict commodity grades information from unstructured commodity descriptions coming from bill-of-lading dataset 95% less manual effort.
- Owned end-to-end data ingestion framework for a core product vertical, coordinating with stakeholders to integrate 36+ data sources and maintain SLA-driven daily refresh cycles.
- Reduced manual data processing effort by 95% and optimized AWS infrastructure costs by 33% by process optimization.

Associate Manager – FCC Data Science Mar 2020 – Mar 2022
Standard Chartered GBS, Bangalore, India

- Designed and deployed ML models for suspicious transaction prioritization system, reducing manual review time by 60%.
- Developed end to end system for multi region suspicious transaction prioritization ML model.
- Owned delivery of 43 AML scenario tuning, including migration from PL/SQL to HiveQL.
- Partnered with compliance and business stakeholders to align models with regulatory requirements.
- Mentored junior team members on AML modeling techniques.

Data Scientist

Aug 2016 – Mar 2020

IBM India Pvt. Ltd., Bangalore, India

- Engineered a tool to streamline project allocation for idle employees using text classification, improving process efficiency and reducing allocation time by 40%.
- Developed a NLP and deep learning-based framework using LSTM and BERT to automate tech support ticket analysis, achieving high accuracy, securing a \$200K deal, and enhancing client satisfaction.
- Contributed to development of a product sales prediction model for a major pharmaceutical client, supporting demand forecasting and business planning.
- Designed a solution to predict lifecycle of electric poles in a subway grid system, improving maintenance planning.
- Designed and deployed a prediction model for electricity load forecasting in the North India region.
- Developed a backend system for a shipping client to extract data from images and populate dashboards, reducing manual intervention by 80%.

ADDITIONAL INFORMATION

- **Kaggle:** Active participant in data science competitions; continuously exploring advanced ML and GenAI techniques. [!\[\]\(815df092dd722ee9268ef8e6d0193e3a_img.jpg\)](#)
- **Notice Period:** 2 months (negotiable)
